*Editor-in-Chief*

R.W. COTTLE, Department of Operations Research, Stanford University, Stanford, CA 94305, U.S.A.

*Co-Editors*

L.C.W. DIXON, Numerical Optimisation Centre, The Hatfield Polytechnic, College Lane, Hatfield, Hertfordshire AL10 9AB, England

B. KORTE, Institut für Ökonometrie und Operations Research, Universität Bonn, Nassestrasse 2, D-5300 Bonn 1, W. Germany

T.L. MAGNANTI, Sloan School of Management, Massachusetts, Institute of Technology, Cambridge, MA 02139, U.S.A.

M.J. TODD, School of Operations Research and Industrial Engineering, Upson Hall, Cornell University, Ithaca, NY 14853, U.S.A.

*Associate Editors*

E.L. ALLGOWER, Colorado State University, Fort Collins, CO, U.S.A.

R. BARTELS, University of Waterloo, Waterloo, Ontario, Canada

V. CHVATAL, McGill University, Montreal, Quebec, Canada

J.E. DENNIS, Jr., Rice University, Houston, TX, U.S.A.

B.C. EAVES, Stanford University, CA, U.S.A.

R. FLETCHER, University of Dundee, Dundee, Scotland

J.-B. HIRIART-URRUTY, Université Paul Sabatier, Toulouse, France

M. IRI, University of Tokyo, Tokyo, Japan

R.G. JEROSLOW, Georgia Institute of Technology, Atlanta, GA, U.S.A.

D.S. JOHNSON, Bell Telephone Laboratories, Murray Hill, NJ, U.S.A.

C. LEMARECHAL, INRIA-Laboria, Le Chesnay, France

L. LOVASZ, University of Szeged, Szeged, Hungary

L. MCLINDEN, University of Illinois, Urbana, IL, U.S.A.

M.W. PADBERG, New York University, New York, U.S.A.

M.J.D. POWELL, University of Cambridge, Cambridge, England

W.R. PULLEYBLANK, University of Calgary, Calgary, Alberta, Canada

K. RITTER, University of Stuttgart, Stuttgart, W. Germany

R.W.H. SARGENT, Imperial College, London, England

D.F. SHANNO, University of Arizona, Tucson, AZ, U.S.A.

L.E. TROTTER, Jr., Cornell University, Ithaca, NY, U.S.A.

H. TUY, Institute of Mathematics, Hanoi, Socialist Republic of Vietnam

R.J.B. WETS, University of Kentucky, Lexington, KY, U.S.A.

C. WITZGALL, National Bureau of Standards, Washington, DC, U.S.A.

*Senior Editors*

E.M.L. BEALE, Scicon Computer Services Ltd., Milton Keynes, England

G.B. DANTZIG, Stanford University, Stanford, CA, U.S.A.

L.V. KANTOROVICH, Academy of Sciences, Moscow, U.S.S.R.

T.C. KOOPMANS, Yale University, New Haven, CT, U.S.A.

A.W. TUCKER, Princeton University, Princeton, NJ, U.S.A.

P. WOLFE, IBM Research Center, Yorktown Heights, NY, U.S.A.

**Mathematical Programming** is published in 3 volumes of 3 issues per year. The subscription price for 1982 (Vols. 22-24) is Dfl.432.00 (US \$ 172.75) including postage and handling. The subscription can also be taken out in conjunction with the series **MATHEMATICAL PROGRAMMING STUDIES** (Nos. 15-19). The combined subscription price is Dfl. 600.00 (US \$ 240.00). The Dutch Guilder price is definitive; the currency equivalent is for your guidance only.

**Subscription orders** should be sent to the publisher, NORTH-HOLLAND PUBLISHING COMPANY, P.O. Box 211, 1000 AE Amsterdam, The Netherlands, or to any subscription agent or bookseller. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge. The publisher also handles orders for back issues.

**Individual subscriptions** are available through membership in the Mathematical Programming Society, Inc., c/o International Statistical Institute, 428 Prinses Beatrixlaan, 2270 AZ Voorburg, The Netherlands.

**Manuscripts submitted** for publication and related correspondence should be addressed to the Editor-in-Chief or to one of the Co-Editors listed above.

## LIST OF STUDIES

Volumes 7-15

### STUDY 7

*Complementarity and Fixed Point Problems*, edited by M. L. Balinski and R. W. Cottle (1978)

### STUDY 8

*Polyhedral Combinatorics: Dedicated to the memory of D. R. Fulkerson*, edited by M. L. Balinski and A. J. Hoffman (1978)

### STUDY 9

*Mathematical Programming in Use*, edited by M. L. Balinski and C. Lemarechal (1978)

### STUDY 10

*Point-to-Set Mappings and Mathematical Programming*, edited by P. Huard (1979)

### STUDY 11

*Engineering Optimization*, edited by M. Avriel and R. S. Dembo (1979)

### STUDY 12

*Combinatorial Optimization*, edited by M. W. Padberg (1980)

### STUDY 13

*Combinatorial Optimization II*, edited by V. J. Rayward-Smith (1980)

### STUDY 14

*Mathematical Programming at Oberwolfach*, edited by H. König, B. Korte and K. Ritter (1981)

### STUDY 15

*Network Models and Applications*, edited by D. Klingman and J. M. Mulvey (1981)

# Fuzzy sets and systems

## Editors:

C. NEGOITA, str. Traian 204,  
Bucharest, Romania, L. A. ZADEH,  
University of California, Department  
of E.E.C.S., Berkeley, CA, U.S.A., and  
H.-J. ZIMMERMANN (Principal Editor),  
Lehrstuhl für Unternehmensforschung,  
RWTH Aachen, Templergraben 64,  
Aachen, W. Germany.

## Aims and Scope:

The primary purpose of the international journal FUZZY SETS AND SYSTEMS is to improve professional communication between scientists and practitioners who are interested in, **doing research** on, or **applying** Fuzzy Sets and Systems.

Fuzzy Sets have become a concern and a tool for persons working in a variety of areas: for example, mathematicians in many different fields such as logic, topology, algebra, etc., are doing research in the area of Fuzzy Sets. Similarly, the areas of general systems, intelligent systems, artificial intelligence, decision theory, and optimization, approximate reasoning, sociology, and behavioral sciences are applying Fuzzy Sets. Moreover the theory of Fuzzy Sets has already affected a wide variety of disciplines such as control theory, medicine, information processing, cluster analysis genetics, electrical engineering, operations research, etc.

The editors of FUZZY SETS AND SYSTEMS hope to increase the concentrated dissemination of information in this area for the benefit of all scientists and practitioners concerned, thereby accelerating the progress of research in the area of Fuzzy Sets and in all the areas of their application.

# Computer Scheduling of Public Transport

## Urban Passenger Vehicle and Crew Scheduling

Papers based on presentations at the International Workshop held at the University of Leeds, 16-18 July, 1980

edited by ANTHONY WREN, Head of the Operational Research Unit, Department of Computer Studies, The University of Leeds, England

1981. viii + 360 pages Price: US \$58.50/Dfl. 120.00 ISBN 0-444-86170-x

This work contains 23 papers relating to all the major automatic systems for scheduling buses, (and other means of public transport) their crews in the Western World, and is the first formal publication of any of these systems. The contents include both descriptions of the systems and papers relating the experience of transport management in using them. It is shown that the use of computers for bus and crew scheduling is a reality from which all operators of reasonable size can now benefit.

The papers are arranged according to subject areas. Six articles are either surveys or descriptions by management of implemented systems, five describe vehicle scheduling systems, and 9 papers describe driver scheduling. An additional three papers cover, respectively, problems of assigning work to actual men, of recording relevant information, and the terms used in bus scheduling.

To all those involved in Transportation, Computing and Operational Research, this work is sure to present a survey of progress and up-to-date report on computer scheduling of public transport.

**CONTENTS:** Foreword. Subject Area: I. Surveys and Implementations. 1. General Review of the Use of Computers in Scheduling Buses and their Crews (A.

Wren). 2. The Status of Computer-Aided Scheduling in North America (J. W. Schmidt and R. Knight). 3. Service Optimisation and Route Costing and Associated Computer Programs (R. R. Davies and D. Williams). 4. Computerized Vehicle and Driver Scheduling for the Hamburger Hochbahn Aktiengesellschaft (J. Hoffstadt). 5. The Role of the Systems Department and the Role of Operations Management in Introducing Computer Assistance to Bus Scheduling (R. W. Dickinson, W. F. Dryan and P. D. Manington). 6. A Perspective on Automated Bus Operator Scheduling: Five Years Experience in Portland, Oregon (M. G. Landis). II. Bus and Train Scheduling Methods. 7. Bus Scheduling Program Development for A.T.A.F. Florence (V. Brandani et al.). 8. A Deficit Function Approach for Bus Scheduling (H. I. Stern and A. Ceder). 9. VAMPIRES and TASC: Two Successfully Applied Bus Scheduling Programs (B. M. Smith and A. Wren). 10. Automating Trip Scheduling and Optimal Vehicle Assignments (I. T. Keaveny and S. Burbeck). 11. Scheduling an Urban Railway (K. L. W. Dexter). III. Bus Crew Scheduling Methods. 12. Advances in Computer Assisted Runcutting in North America (P. M. Hildyard and H. V. Wallis). 13. Two Approaches to Computer Crew Scheduling (M.E. Parker and B. M. Smith). 14. Practical Aspects in Automatic Crew Scheduling (C. Piccione et al.). 15. Crew Scheduling by Computer: A Test on the Possibility of Designing Duties for a Certain Busline (J. M. J. Borret and A. W. Roes). 16. Hastus I: A Mathematical Programming Approach to the Bus Driver Scheduling Problem (R. Lessard, J-M. Rousseau and D. Dupuis). 17. An Integer Programming Approach to Scheduling (D. M. Ryan and B. A. Foster). 18. A Computer Based Crew Scheduling System Using a Mathematical Programming Approach (G. Mitra and A. P. G. Welsh). 19. A Problem Decomposition Approach to Scheduling the Drivers and Crews of Mass Transit Systems (R. E. Ward, P. A. Durant and A. B. Hallman). 20. Experimentation with a Computerized System for Scheduling Mass Transit Vehicles and Crews (M. O. Ball, L. D. Bodin and R. Dial). IV. Miscellaneous Papers. 21. Attendance and Rostering Systems (J. K. Jachnik). 22. Automating Extraboard Assignments and Coach Operator Timekeeping (J. W. Schmidt and R. J. Fennelly). 23. A Glossary of Terms in Bus and Crew Scheduling (T. Hartley).

# Game Theory and Mathematical Economics

Proceedings of the Seminar on Game Theory and Mathematical Economics, held at Bonn/Hagen, Germany, 7-10 October, 1980

*Managing Editors:* O. MOESCHLIN, University of Hagen, West Germany, and D. PALLASCHKE, University of Bonn, West Germany.

*Editorial Board:* W. EBERL, Hagen; K. FAN, Santa Barbara; R. HENN, Karlsruhe; H. KÖNIG, Saarbrücken; J. ŁOS, Warsaw; B. MITYAGIN, Columbus; O. MOESCHLIN, Hagen; D. PALLASCHKE, Bonn; B. PELEG, Jerusalem; D. PLACHKY, Münster; S. ROLEWICZ, Warsaw; D. SCHMEIDLER, Tel-Aviv.

1981. x + 464 pages. US \$59.50/Dfl. 140.00 ISBN 0-444-86296-x

This book contains selected papers presented at the Seminar on Game Theory and Mathematical Economics. It includes papers in which new results were given, as well as contributions by distinguished scholars which discuss the current state-of-the-art.

Game Theory and Mathematical Economics play an important role not only in the fields of economics but also as independent mathematical disciplines. They also integrated results and methods from other fields of mathematics and they have on the other hand also influenced developments in other mathematical disciplines.

Apart from the main topics *Game Theory* and *Mathematical Economics*, papers are also included on topics such as *Fixed-Point- and Optimization Theory* and *Measure Theoretic Concepts*.

**CONTENTS:** Preface. **Parts:** I. **Game Theory.** Papers by: W. Albers; W. Armbruster; E. E. C. Van Damme; M. Egea; M. J. M. Jansen and

S. H. Tijs; R. E. Kihlstrom; A. E. Roth and D. Schmeidler; J. Kindler; J. F. Mertens and A. Neyman; P. Milgrom and R. J. Weber; B. Peleg; Y. Tauman; S. H. Tijs; J. Van der Wal; S. Weber; J. Wessels; A. Wieczorek. II. **Mathematical Economics.** Papers by: A. Borglin and H. Keiding; B. Fuchssteiner; J. H. Van Geldrop; J. Greenberg and B. Shitovitz; C. Klein; O. Moeschlin; W. F. Richter; H. J. Skala.

III. **Fixed-Point- and Optimization Theory.** Papers by: S. Dolćki; K. Fan; S. Hart; A. Hordijk and L. C. M. Kallenbergh; A. Irlé; K. M. Przyluski; R. T. Rockafellar; S. Rolewicz; M. Schäl; L. S. Shapley; S. Simons; J. E. Spingarn.

IV. **Measure Theoretic Concepts and Other Tools.** Papers by: D. Bierlein; E.-E. Doberkat; B. Mityagin; D. Müssmann and D. Plachky; D. Przeworska-Rolewicz; S. M. Robinson.

**Author Index.**

*Still available:*

## MATHEMATICAL PROGRAMMING and MATHEMATICAL PROGRAMMING STUDIES

### Instructions to authors\*

Authors are requested to send four copies (or fewer in cases of hardship) of manuscripts directly to the Editor-in-Chief or to any of the Co-Editors. (See inside of front cover for names and addresses.) In order to minimize postage and handling costs, manuscripts will not be returned to authors unless specifically requested.

**Submission** of a manuscripts is considered to be a representation that it, or any translation of it, has not been copyrighted or published, that it is not being submitted for publication elsewhere and that, if the work received official sponsorship, it has been duly released for open publication.

**Manuscripts** should be typed double-spaced on 8½" by 11" paper or a close metric equivalent. Manuscripts may be submitted for editorial consideration in any language, but English is the official language for publication. The title page should give the following information:

- Title of the paper
- (First) author and affiliation
- (Second) author and affiliation
- ... (etc.)
- Abstract (formula free, at most 200 words)
- Key words
- Abbreviated title (for running heads)

**Mathematical notation** should be selected to simplify the typesetting process. In particular, notation calling for symbols appearing one directly over another should be avoided.

**Figures** are to be drafted in India ink on white paper in a form suitable for photographic reproduction and reduction. Lettering should be uniform of size. Typewritten lettering on figures is not acceptable. Figures should be designated by Arabic numerals and the captions should be typed, double-spaced, on a separate sheet rather than lettered on the figures themselves.

**Footnotes** should be numbered consecutively and typed, double-spaced, in a separate list at the end of the paper. In the text footnotes, which should be kept to a minimum, are indicated by superscript numbers alone. All references are to be listed by author at the end of the paper.

**References** should conform to one of the following two models. Either numbered consecutively (with examples [1] a journal paper, [2] a book):

- [1] M.L. Balinski, "On two special classes of transportation polytopes", *Mathematical Programming Study* 1 (1974) 43–58
- [2] L.V. Kantorovich, "Matematicheskie metody organisatskii planirovaniya proizvodstva", Leningrad University (Leningrad, 1939). [Translated as: "Mathematical methods in the organization and planning of production", *Management Science* 6 (1960) 366–422.]

and reference callouts in text indicated by bracketed symbols, e.g. [1] or [2, p. 25]. Or listed lexicographically by author (the first example being a paper in a bound collection, the second a report, thesis, or pamphlet):

- G.B. Dantzig, "Maximization of a linear function of variables subject to linear inequalities", in: T.C. Koopmans, ed., *Activity analysis of production and allocation* (Wiley, New York, 1951) pp. 339–347.
- T.S. Motzkin, "Beiträge zur Theorie der linearen Ungleichungen", Dissertation, University of Basel (Jerusalem, 1936).

and reference callouts in text indicated by Dantzig (1951), Motzkin (1936), with (1951a), (1951b), etc., used if necessary.

A total of thirty **reprints** of each paper will be provided free of charge. A contributor to a STUDY will also receive a book edition of the STUDY. The author of a monograph published as a STUDY receives royalties on book sales and several copies of the book edition. Additional reprints or copies of STUDIES may be ordered directly from the publisher. There are no page charges.

\*A more comprehensive 'Instructions to Authors' brochure for those submitting manuscripts to the Journal is available upon request from the publisher.

## **Editorial Policy**

MATHEMATICAL PROGRAMMING and MATHEMATICAL PROGRAMMING STUDIES publish original work dealing with every theoretical, computational, and applicational aspect of mathematical programming; that is, everything of direct or indirect use for questions surrounding the problem of finding the extreme values of functions of many variables. Included, along with the conventional topics of linear, nonlinear, integer and stochastic programming, are computer experimentation, techniques for formulating and applying mathematical programming models, computer programming devices of special interest to the subject, unconstrained optimization, convexity, polytopes, and control and game theory done in the spirit of mathematical programming.

Expositions and surveys, original research, reports on computer routines and computer experimentation, and new or ingenious practical applications are published.

MATHEMATICAL PROGRAMMING contains a 'Short Communication' section consisting of brief and timely announcements of new results, applications, codes or experiments. These submission benefit from accelerated refereeing. Papers omitting proofs and details are encouraged if accompanied by supporting material establishing the validity of the assertions made.

Each MATHEMATICAL PROGRAMMING STUDY is simultaneously published in journal and book and is devoted to a unified subject matter. A STUDY may be a collection of several contributed papers, a single monograph, the proceedings of a specialized conference, a guide to current computational practices, or any excellent clearly focused volume which is useful. Extensive surveys together with papers in the same area may occasionally be combined from submissions to the journal (with author's consent) to form a STUDY on a subject of particular interest. Abstracts of papers or summaries of contents are published in the journal.

All matter to be published must be refereed. However, the usual refereeing processes are curtailed for short reports.

The language of both publications is English, although manuscripts may be submitted for editorial consideration in any language.

---

## **APPLICATION FOR MEMBERSHIP**

Mail to: MATHEMATICAL PROGRAMMING SOCIETY, INC.  
c/o International Statistical Institute  
428 Prinses Beatrixlaan  
2270 AZ Voorburg, The Netherlands

Cheques or money orders should be made payable to The Mathematical Programming Society, Inc. in one of the currencies indicated below.

- I wish to enroll as a member of the Society. My dues payment for 1982, which covers subscription to volumes 22-24 of MATHEMATICAL PROGRAMMING is enclosed: Dfl. 93.00 (or \$ 40.00 or £ 20.00 or Sw.Fr. 71.00 or FF 200.00 or DM 84.00).
- As a member of the Society I wish to subscribe to the serial edition of MATHEMATICAL PROGRAMMING STUDIES, Nos. 15-19. Payment is enclosed: Dfl. 70.00 (or \$ 27.00 or £ 15.00 or Sw.Fr. 54.00 or FF 151.00 or DM 63.00).

My subscription(s) is (are) for my personal use and not for the benefit of any library or other institution.

## **The Mathematical Programming Society**

The Mathematical Programming Study is an international organization dedicated to the support and development of the applications, computational methods, and theory of mathematical programming in its widest sense. In addition to its journal, MATHEMATICAL PROGRAMMING, the Society issues the series MATHEMATICAL PROGRAMMING STUDIES. The Society holds the International Symposium on Mathematical Programming triennially and sponsors many other meetings in the subject throughout the world. It has instituted a program of Prizes for outstanding advances in the subject. A detailed description of the Society and its activities can be obtained from Dr. Philip Wolfe, IBM Research Center 33-2, P.O. Box 218, Yorktown Heights, NY 10598, U.S.A.

MATHEMATICAL PROGRAMMING STUDIES, which are monographs or collections of papers in a particular area of the subject, are published as determined by the needs of the mathematical programming community. They are offered in units of three successive STUDIES: to members of the Society as indicated in the Application for Membership (preceding page), and otherwise directly from the publisher.

### **ELECTED OFFICERS**

#### *Chairmen:*

G.B. Dantzig (1973–1974)  
E.M.L. Beale (1974–1976)  
A.E. Tucker (1976–1978)  
P. Wolfe (1978–1980)  
J. Abadie (1980–1983)

#### *Treasurers:*

J.S. Folkers (1973–1975)  
F.A. Lootsma (1975–1980)  
M.W. Padberg (1980–1983)

#### *Council Members-at-Large:*

1973–1975: B. Martos, A. Orden, M.J.D. Powell, P. Wolfe  
1975–1977: J. Abadie, R. Fletcher, D.R. Fulkerson (to 1976), G.P. McCormick (from 1976),  
R.T. Rockafellar  
1977–1979: R.W. Cottle, L. Lasdon, C.L. Nemhauser, L.A. Wolsey  
1979–1982: M. Avriel, M. Held, A. Land, A. Orden

### **APPOINTED OFFICERS**

#### *Chairmen of the Executive Committee:*

R.W. Cottle (1973–1976)  
A.C. Williams (1976–present)

#### *Editors in Chief:*

M.L. Balinski (1970–1980)  
R.W. Cottle (1980–present)

### **STANDING COMMITTEES, DATES OF FORMATION, PRESENT CHAIMEN**

## Aims/Scope:

OPERATIONS RESEARCH LETTERS will be a novel and innovative publication for literature on all aspects of operations research and the management and decision sciences. The features that make it different from existing journals in the field are:

- concise articles - limited to four printed pages in double column format.
- rapid publication - within three months of submission.
- broad coverage of the literature.

Letter journals are a proven successful medium of communication in the physical sciences, and are now published in many fields, including economics and computer science.

The maturation of operations research has led to such a proliferation of literature that it has become impossible for researchers and practitioners to keep up with new developments out of their specialization and even within, because of long publication delays. OPERATIONS RESEARCH LETTERS will help to alleviate these problems. The concise article format permits the editorial board to process papers very rapidly and enables the reader to learn efficiently about new results and developments.
